

Why Should I Care?

Because...

...the climate is changing and humans are the major cause

...animal and plant extinctions are happening faster than at any time in history

...every bucket of seawater contains plastic

...every person contains chemical residues

...the arctic ocean will be ice free in less than a decade

...we have placed our grandchildren in jeopardy

...we have been lured into thinking unsustainable economic growth makes people happier

...we are losing our connection with community, family and everything around us

...we have forgotten that we are part of nature

...we have a choice!
